

VIKTORIYA KOPTEVA

QA ENGINEER

SUMMARY:

All my life I am engaged in creativity: music, journalism, poetry, theater. These are the types of creativity that activate not only the right hemisphere of the brain, but also the left. I like to think outside the box and think creatively, think a lot and analyze. IT is also creativity. I love various applications, and I would like to put my hand to making sure that a really high-quality product is released on the market, which will be used, which I myself will use. I want to become part of a cool team of specialists with burning eyes. I am sure that my meticulousness, non-standard thinking, perseverance, thoughtfulness, imaginative and analytical thinking will help me find my place in IT.
